

Vinyl Grid Cover

Give Your Ceiling a New Look Overnight

Ceilings typically consist of three types of materials, tiles, vents, and metal t-bar grid. Tiles and vents can be cleaned or changed out as needed. What about the t-bar when it starts looking old and stained. It can be cleaned but after 10 or more years, the paint becomes dull, there may be permanent marks. The t-bar looks old.

Changing the t-bar is expensive and time consuming. To replace the t-bar system, requires a licensed contractor, city permits, a disruption to a business, and a significant amount of money. A more practical solution is available. **Install vinyl grid covers.**

Vinyl grid covers snap on the metal t-bars, come in different colors, require no permits, can be installed after hours, and costs less than 8% of an entire system installation. Once installed, the grid covers improve a ceilings appearance and they are cleanable.

A dull, worn ceiling gives a bad impression of all work environments, office, kitchen, bakery, dining room. This negative appearance will affect customers. They are more likely to think negatively about service, food, and other products.

Employees may not feel proud of their work location, may not be as likely to take care of equipment nor comply with work standards.

A small investment of time and money can make a ceiling look new. Customers and employees will respond positively to the professional look. The work area will appear brighter, cleaner, and will be a positive reflection on your services and/or products.

Do it yourself or hire someone to do the work. Give your location a new look overnight!
